Kouya Tochikubo "Renewable authentication and encryption systems IPSJ Journal August 2000" discloses a method for verifying that data received by a terminal j have been sent by a terminal i authorized by a trusted center, the terminal i and the terminal j being connected to a network and authentication program used in the terminal i and authentication program used in the terminal j are sent by the trusted center. JP 2001-211152 teaches mutual authentication method and device A receiving random number Rb which is 64 bits and ID(b) generated and transmitted from device B, device A generating Ra from the received Rb and ID(b), the key Kab ciphering data and returning to B, and teach further verification between devices A and B (see par. 116-120). However device A knows device B wherein the ID (b) is self ID and/or none of the references teach the method for verifying that data received by a receiver apparatus have been sent by a transmitter authorized by a trusted third party to transmit the data, the transmitter and the receiver apparatus being connected to a digital network, the method performed by the receiver apparatus comprising: (a) receiving, at the receiver apparatus, the data and an identifier

for the data; (b) generating a random number; (c) broadcasting said random number and said identifier over the network; (d) receiving from the transmitter a response computed by applying a first function to said random number and to said identifier; (e) verifying the received response by applying a second function to the received response, to said random number and to said identifier; the first function having previously been delivered to the transmitter by the trusted third party and the second function being a function for verifying the result of the first function, previously delivered by the trusted third party to the receiver apparatus; wherein the receiver apparatus does not know the identity of the transmitter; and wherein the transmitter is a set top box and the receiver apparatus is a digital television.
